Data Preservation Alliance for the Social Sciences

Introduction

The Social Sciences (Data-PASS) is the process of systematically preserving and archiving digital social science data. We seek data that are:

- Unrepeated or rare events
- Hard to reach population
- Theoretically and/or methodologically ground breaking
- Responsible for the field
- A single case by case basis as needed, the primary guidelines that will help move the data collection into the acquisition and processing phase.

This framework will allow the partners to make consistent judgments that will help across the data collection, the acquisition and processing phase.

Data Acquisition

Selecting data sets for inclusion in the Data-PASS collection. RTI and testing processes and procedures for evaluating data sets for inclusion in the Data-PASS collection. RTI is working with them to map their current acquisition guidelines that are to be verified the contents of the data collection.

This includes the following:

- How usable are the data?
- How significant are the data for research?

This framework will answer the following questions:

- Are the data accessible?
- Are the data usable?
- Are the data significant?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?

Appraisal.
The partners will apply standard selection, or appraisal, criteria to examine data collections. In developing appraisal, the partners will answer the following questions:

- How significant are the data to the research community?
- Are the data appropriate?
- Are the data consistent?
